

Adding Two Proper Fractions (J)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{2}{3} + \frac{1}{12} =$

2. $\frac{1}{6} + \frac{1}{2} =$

3. $\frac{1}{3} + \frac{6}{18} =$

4. $\frac{1}{3} + \frac{1}{6} =$

5. $\frac{2}{8} + \frac{2}{4} =$

6. $\frac{2}{6} + \frac{5}{12} =$

7. $\frac{3}{5} + \frac{4}{20} =$

8. $\frac{1}{3} + \frac{2}{6} =$

9. $\frac{5}{9} + \frac{6}{18} =$

10. $\frac{2}{4} + \frac{5}{20} =$

Adding Two Proper Fractions (J) Answers

Name: _____

Date: _____

Score: _____

Calculate each sum.

$$1. \quad \frac{2}{3} + \frac{1}{12} = \frac{8}{12} + \frac{1}{12} = \frac{9}{12} = \frac{3}{4}$$

$$2. \quad \frac{1}{6} + \frac{1}{2} = \frac{1}{6} + \frac{3}{6} = \frac{4}{6} = \frac{2}{3}$$

$$3. \quad \frac{1}{3} + \frac{6}{18} = \frac{6}{18} + \frac{6}{18} = \frac{12}{18} = \frac{2}{3}$$

$$4. \quad \frac{1}{3} + \frac{1}{6} = \frac{2}{6} + \frac{1}{6} = \frac{3}{6} = \frac{1}{2}$$

$$5. \quad \frac{2}{8} + \frac{2}{4} = \frac{2}{8} + \frac{4}{8} = \frac{6}{8} = \frac{3}{4}$$

$$6. \quad \frac{2}{6} + \frac{5}{12} = \frac{4}{12} + \frac{5}{12} = \frac{9}{12} = \frac{3}{4}$$

$$7. \quad \frac{3}{5} + \frac{4}{20} = \frac{12}{20} + \frac{4}{20} = \frac{16}{20} = \frac{4}{5}$$

$$8. \quad \frac{1}{3} + \frac{2}{6} = \frac{2}{6} + \frac{2}{6} = \frac{4}{6} = \frac{2}{3}$$

$$9. \quad \frac{5}{9} + \frac{6}{18} = \frac{10}{18} + \frac{6}{18} = \frac{16}{18} = \frac{8}{9}$$

$$10. \quad \frac{2}{4} + \frac{5}{20} = \frac{10}{20} + \frac{5}{20} = \frac{15}{20} = \frac{3}{4}$$
