

Adding Two Proper Fractions (F)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{2}{3} + \frac{12}{18} =$

2. $\frac{8}{9} + \frac{1}{3} =$

3. $\frac{2}{4} + \frac{13}{16} =$

4. $\frac{1}{2} + \frac{4}{6} =$

5. $\frac{8}{9} + \frac{13}{18} =$

6. $\frac{2}{4} + \frac{11}{20} =$

7. $\frac{5}{6} + \frac{6}{18} =$

8. $\frac{5}{9} + \frac{11}{18} =$

9. $\frac{3}{5} + \frac{8}{15} =$

10. $\frac{7}{8} + \frac{1}{2} =$

Adding Two Proper Fractions (F) Answers

Name: _____

Date: _____

Score: _____

Calculate each sum.

$$1. \quad \frac{2}{3} + \frac{12}{18} = \frac{12}{18} + \frac{12}{18} = \frac{24}{18} = \frac{4}{3} = 1\frac{1}{3}$$

$$2. \quad \frac{8}{9} + \frac{1}{3} = \frac{8}{9} + \frac{3}{9} = \frac{11}{9} = 1\frac{2}{9}$$

$$3. \quad \frac{2}{4} + \frac{13}{16} = \frac{8}{16} + \frac{13}{16} = \frac{21}{16} = 1\frac{5}{16}$$

$$4. \quad \frac{1}{2} + \frac{4}{6} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1\frac{1}{6}$$

$$5. \quad \frac{8}{9} + \frac{13}{18} = \frac{16}{18} + \frac{13}{18} = \frac{29}{18} = 1\frac{11}{18}$$

$$6. \quad \frac{2}{4} + \frac{11}{20} = \frac{10}{20} + \frac{11}{20} = \frac{21}{20} = 1\frac{1}{20}$$

$$7. \quad \frac{5}{6} + \frac{6}{18} = \frac{15}{18} + \frac{6}{18} = \frac{21}{18} = \frac{7}{6} = 1\frac{1}{6}$$

$$8. \quad \frac{5}{9} + \frac{11}{18} = \frac{10}{18} + \frac{11}{18} = \frac{21}{18} = \frac{7}{6} = 1\frac{1}{6}$$

$$9. \quad \frac{3}{5} + \frac{8}{15} = \frac{9}{15} + \frac{8}{15} = \frac{17}{15} = 1\frac{2}{15}$$

$$10. \quad \frac{7}{8} + \frac{1}{2} = \frac{7}{8} + \frac{4}{8} = \frac{11}{8} = 1\frac{3}{8}$$
