

Adding Two Proper Fractions (F)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{2}{7} + \frac{4}{10} =$

2. $\frac{1}{9} + \frac{2}{10} =$

3. $\frac{2}{7} + \frac{2}{6} =$

4. $\frac{3}{5} + \frac{3}{12} =$

5. $\frac{2}{4} + \frac{9}{19} =$

6. $\frac{2}{4} + \frac{2}{11} =$

7. $\frac{2}{4} + \frac{3}{9} =$

8. $\frac{4}{6} + \frac{2}{19} =$

9. $\frac{6}{8} + \frac{2}{9} =$

10. $\frac{2}{4} + \frac{4}{19} =$

Adding Two Proper Fractions (F) Answers

Name: _____

Date: _____

Score: _____

Calculate each sum.

$$1. \quad \frac{2}{7} + \frac{4}{10} = \frac{20}{70} + \frac{28}{70} = \frac{48}{70} = \frac{24}{35}$$

$$2. \quad \frac{1}{9} + \frac{2}{10} = \frac{10}{90} + \frac{18}{90} = \frac{28}{90} = \frac{14}{45}$$

$$3. \quad \frac{2}{7} + \frac{2}{6} = \frac{12}{42} + \frac{14}{42} = \frac{26}{42} = \frac{13}{21}$$

$$4. \quad \frac{3}{5} + \frac{3}{12} = \frac{36}{60} + \frac{15}{60} = \frac{51}{60} = \frac{17}{20}$$

$$5. \quad \frac{2}{4} + \frac{9}{19} = \frac{38}{76} + \frac{36}{76} = \frac{74}{76} = \frac{37}{38}$$

$$6. \quad \frac{2}{4} + \frac{2}{11} = \frac{22}{44} + \frac{8}{44} = \frac{30}{44} = \frac{15}{22}$$

$$7. \quad \frac{2}{4} + \frac{3}{9} = \frac{18}{36} + \frac{12}{36} = \frac{30}{36} = \frac{5}{6}$$

$$8. \quad \frac{4}{6} + \frac{2}{19} = \frac{76}{114} + \frac{12}{114} = \frac{88}{114} = \frac{44}{57}$$

$$9. \quad \frac{6}{8} + \frac{2}{9} = \frac{54}{72} + \frac{16}{72} = \frac{70}{72} = \frac{35}{36}$$

$$10. \quad \frac{2}{4} + \frac{4}{19} = \frac{38}{76} + \frac{16}{76} = \frac{54}{76} = \frac{27}{38}$$
