

## Adding Two Proper Fractions (J)

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_

Calculate each sum.

1.  $\frac{1}{2} + \frac{12}{15} =$

2.  $\frac{6}{9} + \frac{7}{8} =$

3.  $\frac{6}{9} + \frac{1}{2} =$

4.  $\frac{3}{4} + \frac{6}{7} =$

5.  $\frac{2}{7} + \frac{11}{13} =$

6.  $\frac{2}{4} + \frac{13}{19} =$

7.  $\frac{3}{6} + \frac{4}{7} =$

8.  $\frac{2}{7} + \frac{6}{8} =$

9.  $\frac{3}{6} + \frac{9}{11} =$

10.  $\frac{2}{3} + \frac{5}{10} =$

## Adding Two Proper Fractions (J) Answers

Calculate each sum.

$$1. \quad \frac{1}{2} + \frac{12}{15} = \frac{15}{30} + \frac{24}{30} = \frac{39}{30} = \frac{13}{10} = 1\frac{3}{10}$$

$$2. \quad \frac{6}{9} + \frac{7}{8} = \frac{48}{72} + \frac{63}{72} = \frac{111}{72} = \frac{37}{24} = 1\frac{13}{24}$$

$$3. \quad \frac{6}{9} + \frac{1}{2} = \frac{12}{18} + \frac{9}{18} = \frac{21}{18} = \frac{7}{6} = 1\frac{1}{6}$$

$$4. \quad \frac{3}{4} + \frac{6}{7} = \frac{21}{28} + \frac{24}{28} = \frac{45}{28} = 1\frac{17}{28}$$

$$5. \quad \frac{2}{7} + \frac{11}{13} = \frac{26}{91} + \frac{77}{91} = \frac{103}{91} = 1\frac{12}{91}$$

$$6. \quad \frac{2}{4} + \frac{13}{19} = \frac{38}{76} + \frac{52}{76} = \frac{90}{76} = \frac{45}{38} = 1\frac{7}{38}$$

$$7. \quad \frac{3}{6} + \frac{4}{7} = \frac{21}{42} + \frac{24}{42} = \frac{45}{42} = \frac{15}{14} = 1\frac{1}{14}$$

$$8. \quad \frac{2}{7} + \frac{6}{8} = \frac{16}{56} + \frac{42}{56} = \frac{58}{56} = \frac{29}{28} = 1\frac{1}{28}$$

$$9. \quad \frac{3}{6} + \frac{9}{11} = \frac{33}{66} + \frac{54}{66} = \frac{87}{66} = \frac{29}{22} = 1\frac{7}{22}$$

$$10. \quad \frac{2}{3} + \frac{5}{10} = \frac{20}{30} + \frac{15}{30} = \frac{35}{30} = \frac{7}{6} = 1\frac{1}{6}$$
