

Adding Proper and Improper Fractions (G)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{2}{7} + \frac{20}{14} =$

2. $\frac{1}{8} + \frac{28}{16} =$

3. $\frac{1}{3} + \frac{29}{12} =$

4. $\frac{2}{4} + \frac{21}{12} =$

5. $\frac{2}{5} + \frac{46}{20} =$

6. $\frac{2}{7} + \frac{17}{14} =$

7. $\frac{2}{3} + \frac{20}{15} =$

8. $\frac{3}{8} + \frac{26}{16} =$

9. $\frac{2}{3} + \frac{30}{18} =$

10. $\frac{2}{3} + \frac{22}{18} =$

Adding Proper and Improper Fractions (G) Answers

Name: _____

Date: _____

Score: _____

Calculate each sum.

$$1. \quad \frac{2}{7} + \frac{20}{14} = \frac{4}{14} + \frac{20}{14} = \frac{24}{14} = \frac{12}{7} = 1\frac{5}{7}$$

$$2. \quad \frac{1}{8} + \frac{28}{16} = \frac{2}{16} + \frac{28}{16} = \frac{30}{16} = \frac{15}{8} = 1\frac{7}{8}$$

$$3. \quad \frac{1}{3} + \frac{29}{12} = \frac{4}{12} + \frac{29}{12} = \frac{33}{12} = \frac{11}{4} = 2\frac{3}{4}$$

$$4. \quad \frac{2}{4} + \frac{21}{12} = \frac{6}{12} + \frac{21}{12} = \frac{27}{12} = \frac{9}{4} = 2\frac{1}{4}$$

$$5. \quad \frac{2}{5} + \frac{46}{20} = \frac{8}{20} + \frac{46}{20} = \frac{54}{20} = \frac{27}{10} = 2\frac{7}{10}$$

$$6. \quad \frac{2}{7} + \frac{17}{14} = \frac{4}{14} + \frac{17}{14} = \frac{21}{14} = \frac{3}{2} = 1\frac{1}{2}$$

$$7. \quad \frac{2}{3} + \frac{20}{15} = \frac{10}{15} + \frac{20}{15} = \frac{30}{15} = \frac{2}{1} = 2$$

$$8. \quad \frac{3}{8} + \frac{26}{16} = \frac{6}{16} + \frac{26}{16} = \frac{32}{16} = \frac{2}{1} = 2$$

$$9. \quad \frac{2}{3} + \frac{30}{18} = \frac{12}{18} + \frac{30}{18} = \frac{42}{18} = \frac{7}{3} = 2\frac{1}{3}$$

$$10. \quad \frac{2}{3} + \frac{22}{18} = \frac{12}{18} + \frac{22}{18} = \frac{34}{18} = \frac{17}{9} = 1\frac{8}{9}$$
