

Adding Proper and Improper Fractions (F)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{3}{5} + \frac{18}{10} =$

2. $\frac{2}{4} + \frac{15}{12} =$

3. $\frac{1}{3} + \frac{39}{15} =$

4. $\frac{1}{3} + \frac{21}{9} =$

5. $\frac{4}{6} + \frac{3}{2} =$

6. $\frac{1}{2} + \frac{13}{6} =$

7. $\frac{1}{2} + \frac{20}{18} =$

8. $\frac{1}{6} + \frac{3}{2} =$

9. $\frac{1}{2} + \frac{19}{10} =$

10. $\frac{5}{7} + \frac{27}{14} =$

Adding Proper and Improper Fractions (F) Answers

Name: _____

Calculate each sum.

$$1. \quad \frac{3}{5} + \frac{18}{10} = \frac{6}{10} + \frac{18}{10} = \frac{24}{10} = \frac{12}{5} = 2\frac{2}{5}$$

$$2. \quad \frac{2}{4} + \frac{15}{12} = \frac{6}{12} + \frac{15}{12} = \frac{21}{12} = \frac{7}{4} = 1\frac{3}{4}$$

$$3. \quad \frac{1}{3} + \frac{39}{15} = \frac{5}{15} + \frac{39}{15} = \frac{44}{15} = 2\frac{14}{15}$$

$$4. \quad \frac{1}{3} + \frac{21}{9} = \frac{3}{9} + \frac{21}{9} = \frac{24}{9} = \frac{8}{3} = 2\frac{2}{3}$$

$$5. \quad \frac{4}{6} + \frac{3}{2} = \frac{4}{6} + \frac{9}{6} = \frac{13}{6} = 2\frac{1}{6}$$

$$6. \quad \frac{1}{2} + \frac{13}{6} = \frac{3}{6} + \frac{13}{6} = \frac{16}{6} = \frac{8}{3} = 2\frac{2}{3}$$

$$7. \quad \frac{1}{2} + \frac{20}{18} = \frac{9}{18} + \frac{20}{18} = \frac{29}{18} = 1\frac{11}{18}$$

$$8. \quad \frac{1}{6} + \frac{3}{2} = \frac{1}{6} + \frac{9}{6} = \frac{10}{6} = \frac{5}{3} = 1\frac{2}{3}$$

$$9. \quad \frac{1}{2} + \frac{19}{10} = \frac{5}{10} + \frac{19}{10} = \frac{24}{10} = \frac{12}{5} = 2\frac{2}{5}$$

$$10. \quad \frac{5}{7} + \frac{27}{14} = \frac{10}{14} + \frac{27}{14} = \frac{37}{14} = 2\frac{9}{14}$$
