

Adding Proper and Improper Fractions (G)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{1}{4} + \frac{33}{20} =$

2. $\frac{2}{4} + \frac{12}{8} =$

3. $\frac{5}{8} + \frac{3}{2} =$

4. $\frac{1}{2} + \frac{14}{8} =$

5. $\frac{1}{2} + \frac{22}{10} =$

6. $\frac{2}{3} + \frac{28}{18} =$

7. $\frac{5}{6} + \frac{4}{3} =$

8. $\frac{2}{5} + \frac{45}{20} =$

9. $\frac{1}{3} + \frac{14}{9} =$

10. $\frac{3}{4} + \frac{23}{20} =$

Adding Proper and Improper Fractions (G) Answers

Name: _____

Calculate each sum.

$$1. \quad \frac{1}{4} + \frac{33}{20} = \frac{5}{20} + \frac{33}{20} = \frac{38}{20} = \frac{19}{10} = 1\frac{9}{10}$$

$$2. \quad \frac{2}{4} + \frac{12}{8} = \frac{4}{8} + \frac{12}{8} = \frac{16}{8} = \frac{2}{1} = 2$$

$$3. \quad \frac{5}{8} + \frac{3}{2} = \frac{5}{8} + \frac{12}{8} = \frac{17}{8} = 2\frac{1}{8}$$

$$4. \quad \frac{1}{2} + \frac{14}{8} = \frac{4}{8} + \frac{14}{8} = \frac{18}{8} = \frac{9}{4} = 2\frac{1}{4}$$

$$5. \quad \frac{1}{2} + \frac{22}{10} = \frac{5}{10} + \frac{22}{10} = \frac{27}{10} = 2\frac{7}{10}$$

$$6. \quad \frac{2}{3} + \frac{28}{18} = \frac{12}{18} + \frac{28}{18} = \frac{40}{18} = \frac{20}{9} = 2\frac{2}{9}$$

$$7. \quad \frac{5}{6} + \frac{4}{3} = \frac{5}{6} + \frac{8}{6} = \frac{13}{6} = 2\frac{1}{6}$$

$$8. \quad \frac{2}{5} + \frac{45}{20} = \frac{8}{20} + \frac{45}{20} = \frac{53}{20} = 2\frac{13}{20}$$

$$9. \quad \frac{1}{3} + \frac{14}{9} = \frac{3}{9} + \frac{14}{9} = \frac{17}{9} = 1\frac{8}{9}$$

$$10. \quad \frac{3}{4} + \frac{23}{20} = \frac{15}{20} + \frac{23}{20} = \frac{38}{20} = \frac{19}{10} = 1\frac{9}{10}$$
