

Adding Two Proper Fractions (J)

Name: _____

Date: _____

Score: _____

Calculate each sum.

1. $\frac{1}{2} + \frac{14}{15} = \text{---} + \text{---} = \text{---} = \text{---}$

2. $\frac{3}{4} + \frac{4}{5} = \text{---} + \text{---} = \text{---} = \text{---}$

3. $\frac{1}{3} + \frac{12}{17} = \text{---} + \text{---} = \text{---} = \text{---}$

4. $\frac{5}{7} + \frac{10}{17} = \text{---} + \text{---} = \text{---} = \text{---}$

5. $\frac{7}{9} + \frac{1}{2} = \text{---} + \text{---} = \text{---} = \text{---}$

6. $\frac{2}{5} + \frac{2}{3} = \text{---} + \text{---} = \text{---} = \text{---}$

7. $\frac{3}{5} + \frac{2}{3} = \text{---} + \text{---} = \text{---} = \text{---}$

8. $\frac{6}{7} + \frac{9}{11} = \text{---} + \text{---} = \text{---} = \text{---}$

9. $\frac{2}{3} + \frac{11}{19} = \text{---} + \text{---} = \text{---} = \text{---}$

10. $\frac{6}{7} + \frac{10}{19} = \text{---} + \text{---} = \text{---} = \text{---}$

Calculate each sum.

$$1. \quad \frac{1}{2} + \frac{14}{15} = \frac{15}{30} + \frac{28}{30} = \frac{43}{30} = 1\frac{13}{30}$$

$$2. \quad \frac{3}{4} + \frac{4}{5} = \frac{15}{20} + \frac{16}{20} = \frac{31}{20} = 1\frac{11}{20}$$

$$3. \quad \frac{1}{3} + \frac{12}{17} = \frac{17}{51} + \frac{36}{51} = \frac{53}{51} = 1\frac{2}{51}$$

$$4. \quad \frac{5}{7} + \frac{10}{17} = \frac{85}{119} + \frac{70}{119} = \frac{155}{119} = 1\frac{36}{119}$$

$$5. \quad \frac{7}{9} + \frac{1}{2} = \frac{14}{18} + \frac{9}{18} = \frac{23}{18} = 1\frac{5}{18}$$

$$6. \quad \frac{2}{5} + \frac{2}{3} = \frac{6}{15} + \frac{10}{15} = \frac{16}{15} = 1\frac{1}{15}$$

$$7. \quad \frac{3}{5} + \frac{2}{3} = \frac{9}{15} + \frac{10}{15} = \frac{19}{15} = 1\frac{4}{15}$$

$$8. \quad \frac{6}{7} + \frac{9}{11} = \frac{66}{77} + \frac{63}{77} = \frac{129}{77} = 1\frac{52}{77}$$

$$9. \quad \frac{2}{3} + \frac{11}{19} = \frac{38}{57} + \frac{33}{57} = \frac{71}{57} = 1\frac{14}{57}$$

$$10. \quad \frac{6}{7} + \frac{10}{19} = \frac{114}{133} + \frac{70}{133} = \frac{184}{133} = 1\frac{51}{133}$$
