

## Dividing Negative Proper Fractions (C)

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_

Calculate each quotient.

1.  $\left(-\frac{1}{2}\right) \div \left(-\frac{1}{2}\right) = \text{---} \times \text{---} = \text{---} =$

2.  $\frac{3}{4} \div \left(-\frac{3}{5}\right) = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$

3.  $\left(-\frac{1}{6}\right) \div \left(-\frac{3}{4}\right) = \text{---} \times \text{---} = \text{---} = \text{---}$

4.  $\left(-\frac{1}{2}\right) \div \frac{1}{3} = \text{---} \times \text{---} = \text{---} = \text{---}$

5.  $\frac{2}{5} \div \left(-\frac{2}{3}\right) = \text{---} \times \text{---} = \text{---} = \text{---}$

6.  $\frac{2}{3} \div \left(-\frac{1}{2}\right) = \text{---} \times \text{---} = \text{---} = \text{---}$

7.  $\left(-\frac{2}{3}\right) \div \frac{3}{4} = \text{---} \times \text{---} = \text{---}$

8.  $\frac{1}{3} \div \left(-\frac{2}{5}\right) = \text{---} \times \text{---} = \text{---}$

9.  $\left(-\frac{2}{5}\right) \div \left(-\frac{1}{2}\right) = \text{---} \times \text{---} = \text{---}$

10.  $\left(-\frac{1}{3}\right) \div \left(-\frac{3}{4}\right) = \text{---} \times \text{---} = \text{---}$
