

Converting Ounces and Pounds (J)

Convert the mass units in the problems below.

$$\underline{\quad} \text{ tons} = 40,250 \text{ pounds}$$

$$4 \frac{3}{4} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$13 \frac{1}{2} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 18,500 \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 26,500 \text{ pounds}$$

$$12 \frac{1}{2} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$15 \frac{5}{8} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 6,750 \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 14,000 \text{ pounds}$$

$$1 \frac{3}{4} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 9,500 \text{ pounds}$$

$$4 \frac{5}{8} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 17,750 \text{ pounds}$$

$$12 \frac{1}{4} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$18 \frac{7}{8} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 34,250 \text{ pounds}$$

$$12 \frac{7}{8} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 13,000 \text{ pounds}$$

$$5 \frac{1}{4} \text{ tons} = \underline{\quad} \text{ pounds}$$

$$\underline{\quad} \text{ tons} = 20,000 \text{ pounds}$$
